Lets Study Chapter 7 - Risk Assessments - Principles - Hazard Communication - Risk Management A Risk Assessment is an intentional procedure to identify, document, assess and manage the risks associated with the use and handling of hazardous chemicals. This process is performed to determine whether the company's operations are in compliance with current regulations, to enable the company to understand existing and potential risks, and to enable the company to take appropriate, informed and effective remedial action and to inform regulatory agencies. The purpose of a risk assessment is to facilitate the identification of all hazards associated with the process, the products and the facilities. Hazard communication (Hazard Communication) is an integrated set of procedures for communicating safety information at the workplace. Hazard communication is a means by which workers are informed about the risks associated with their work and their role in controlling those risks. "Hazard communication" is also often used to refer to the guidance a company provides to employees about hazards and associated risks. Several types of Hazard communication are used in the workplace: Notice-based communication "Should be used whenever there is a risk of exposure to a hazardous chemical or a potentially hazardous activity. This type of communication provides workers with information about the hazards associated with a chemical or a potentially hazardous activity. (for example, warning labels and Emergency Information cards) Emergency information communication "Should be used whenever there is a risk of exposure to a hazardous chemical or a potentially hazardous activity in a situation where the worker or the immediate. Risk Assessments - Principles - Hazard Communication - Risk Management risk of workplace injury or illness exists. Substance-Specific Risk Factors for Plants and Facilities - 1 - 2. Chemical-Specific Risk Factors for Plants and Facilities - 3 - 4. Regulatory-Specific Risk Factors for Plants and Facilities - 5 - 6. 2.a) International Agency for Research on Cancer (IARC) Does not recommend classifying.. For example, assessing potential hazards that result from the use of a chemical in manufacturing processes. is one of the steps in the risk assessment process. The safety and health of a worker are the ultimate goals of the risk assessment. The risk assessment results must be clearly communicated to management and employees for decision making. The US EPA has developed a risk assessment guide book for chemical manufacturers that is designed to simplify the risk assessment process. Chemical manufacturing is divided into two major steps: Hazard analysis and subsequent risk assessment. With a good, well-documented hazard analysis, the risk assessment
