You can find this option under the Autocad shortcut menu when you open Autocad. Or you can find it under "Programs" > "Autodesk" > "Autocad". Or from the Start menu (Windows XP/Vista) or by typing cmd in the search bar in Windows 7 or 8. Open "command prompt" in Windows XP. Type "autocad.exe /su" in Windows Vista or "autocad.exe /su" in Windows 7 or Windows 8. Step 2: Creating the company name Autocad first searches for the root domain, then the user in the domain, then the computer name and finally the language. The order in which we configure the company name is important. First we need to choose the domain, then the user, then the computer name and lastly the language. We need to do this for each domain which has an Autocad user. Step 3: Now, we need to create the company name in the Autocad software. Open the Autocad

software by clicking on "Autocad" from the start menu (Windows XP) or from the search bar. Select "Accounts" from the drop-down menu on the top right corner. Now we need to choose the domain, the user and the computer name. For this step, I assume that you have the domain, user and computer name in a.txt file that you will enter in the next step. Step 4: Enter the company name in the required fields in the Autocad software. Make sure that the data in the file matches with the fields of the Autocad software. Note: If you just use the company name in the document which you are going to create you will end up having the company name in the address field. Step 5: Create the company name in Autocad software. Click on the "Company" icon from the top right corner. Now select the "Select Company" tab from the left side menu. Now we need to choose the company name. Autocad software will check the file if the company name is not

found. If the company name is found then a "Company name already exists" window will open. The company name is saved for further use. Step 6
